

Table of Contents

<u>March 1968</u>							
1 Whips and loops as apartment antenna	-	-	-	-	-	-	1
<u>May 1968</u>							
2 Folded mini-monopole antenna	-	-	-	-	-	-	4
<u>June 1968</u>							
3 Broadband antenna baluns	-	-	-	-	-	-	8
<u>August 1968</u>							
4 J-pole on six	-	-	-	-	-	-	15
5 Tips for keeping your beam	-	-	-	-	-	-	17
<u>October 1968</u>							
6 Three-band ground plane	-	-	-	-	-	-	18
<u>December 1968</u>							
7 Wide-band bridge baluns	-	-	-	-	-	-	22
<u>January 1969</u>							
8 Stub-switched Stun matched antennas	-	-	-	-	-	-	29
9 Some notes on Cubical Quad antennas measurements	-	-	-	-	-	-	33
10 Antenna and rotator preventive maintenance	-	-	-	-	-	-	36
<u>February 1969</u>							
11 A sloping inverted-vee dipole	-	-	-	-	-	-	40
<u>March 1969</u>							
12 seven-tenth-wavelength ground plane for two meter	-	-	-	-	-	-	44
<u>April 1969</u>							
13 A survey of high-frequency amateur antennas	-	-	-	-	-	-	47
14 An economy six-meter cubical quad	-	-	-	-	-	-	57
<u>June 1969</u>							
15 A top-loaded 80-meter vertical	-	-	-	-	-	-	61
<u>July 1969</u>							
16 Log-periodic yagi beam antenna	-	-	-	-	-	-	64
17 Direct methods for measuring antenna gain	-	-	-	-	-	-	70
18 Stub bandswitched antennas	-	-	-	-	-	-	76
19 A 40-meter bobtail curtain array	-	-	-	-	-	-	80
<u>August 1969</u>							
20 A large homebrew parabolic reflector	-	-	-	-	-	-	83
21 A multiband quad antenna	-	-	-	-	-	-	94
<u>October 1969</u>							
22 Construction of high-frequency diversity antennas	-	-	-	-	-	-	99
<u>November 1969</u>							
23 A multiband long-wire antenna	-	-	-	-	-	-	109
24 Antenna capture area	-	-	-	-	-	-	113
25 A low cost amateur microwave antenna	-	-	-	-	-	-	119
26 Big beam for six-meters	-	-	-	-	-	-	121
<u>December 1969</u>							
27 Low-band converted-vee antenna	-	-	-	-	-	-	124
<u>January 1970</u>							
28 Random-length antenna couplers	-	-	-	-	-	-	128
29 Unidirectional antenna for the low-frequency bands	-	-	-	-	-	-	132
<u>February 1970</u>							
30 Build your own tilt-over antenna mast	-	-	-	-	-	-	137
31 Antenna systems for 80 and 40 meters	-	-	-	-	-	-	145
<u>March 1970</u>							
32 Compact dual-band antennas	-	-	-	-	-	-	154
33 Economical beam for ten-meter	-	-	-	-	-	-	158
<u>March 1970</u>							
34 Unusual cubical quad antenna	-	-	-	-	-	-	161
35 Multiband dipoles for portable use	-	-	-	-	-	-	166
36 Improved triangular-shaped beam antenna	-	-	-	-	-	-	173
37 80 meters vertical beam antenna	-	-	-	-	-	-	178
38 Antenna tuner for optimum power transfer	-	-	-	-	-	-	180
39 The isotropic source and practical antennas	-	-	-	-	-	-	184

40	Underground coaxial transmission lines	-	-	-	-	-	-	-	189
41	Integrated swr bridge and power meter	-	-	-	-	-	-	-	191
42	Some reflections for reflected power	-	-	-	-	-	-	-	194
43	Receiving antennas	-	-	-	-	-	-	-	201
<u>August 1970</u>									
44	Quad antenna design parameters	-	-	-	-	-	-	-	209
45	How to use the smith chart	-	-	-	-	-	-	-	215
<u>May 1971</u>									
46	Four element colinear array for two meters	-	-	-	-	-	-	-	227
47	Adjustable balun for yagi antennas	-	-	-	-	-	-	-	234
48	Homemade tilt-over antenna tower	-	-	-	-	-	-	-	241
49	The double bi-square array	-	-	-	-	-	-	-	245
50	Low-cost compact antennas for 20 meters	-	-	-	-	-	-	-	248
51	Single feedline for multiple antennas	-	-	-	-	-	-	-	253
<u>September 1971</u>									
52	Top-loaded vertical for 80 meters	-	-	-	-	-	-	-	256
<u>October 1971</u>									
53	Modified inverted-V antenna	-	-	-	-	-	-	-	262
<u>May 1972</u>									
54	Three-band groundplane	-	-	-	-	-	-	-	264
55	Nine-element colinear antenna for two meters	-	-	-	-	-	-	-	270
56	Gamma-loop-fed vertical dipole	-	-	-	-	-	-	-	277
57	A successful 1296-MHz Yagi	-	-	-	-	-	-	-	282
58	An all-band phased-vertical antenna system	-	-	-	-	-	-	-	285
<u>October 1972</u>									
59	An efficient all-band tuned dipole	-	-	-	-	-	-	-	289
60	Adding 160-meters to a 40-meter vertical	-	-	-	-	-	-	-	293
